

# B.C. BONES™

## EXCAVATION SITE MAP

### Assembly Instructions:

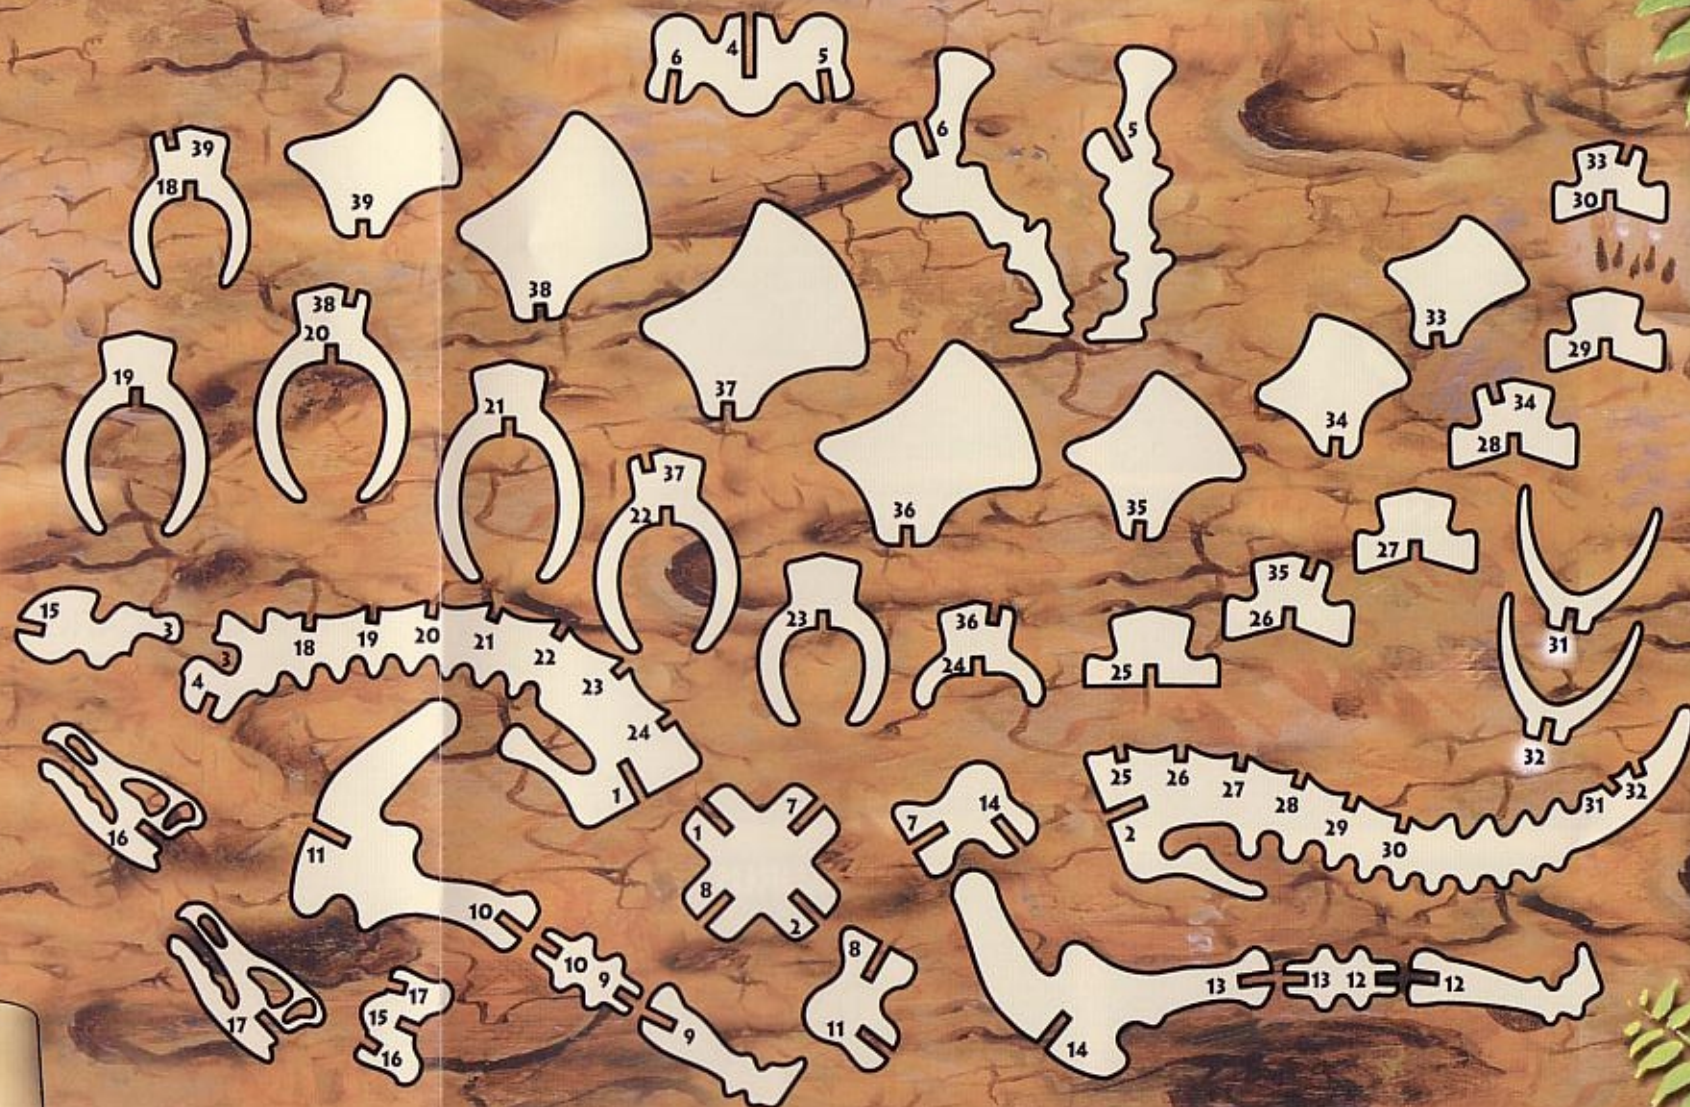

1. Lightly sand any rough edges with the fine sandpaper enclosed in your kit.
2. Lay the B.C. Bones out to match the Excavation Site Map
3. Starting with slot number 1, carefully interlock the B.C. Bones by matching numbers shown on the Map
4. Although some B.C. Bones appear to be the same, it is important to interlock the correct ones, paying careful attention to the legs and order of the ribs.
5. If some B.C. Bones fit too tightly, slightly enlarge the slot using the enclosed sandpaper.
6. If B.C. Bones are too loose, use a small drop of white household glue.
7. When fully assembled, enjoy displaying your B.C. Bones dinosaur in your room or take it apart to build again, making sure to carefully retain all the B.C. Bones.
8. It is also fun to glue it all together or paint it using watercolor markers or paint or tempera paints.

Refer to this B.C. Bones layout to insure the correct direction of key components as you follow the assembly instructions.
